

Viking Survey

Introduction

Viking Survey is an extension to Viking Navigation and thus offers the same ease of use and all features already present in Viking Navigation.

With added support for an array of hydrographic sensors and equipment Viking Survey is a great addition to the Viking product range.

Features Overview:

- 3D DTM Matrix Support
- Advanced graphical Ship Designer
- DXF Support
- Echo Sounder support
- Extensive Viking Log Format
- Local chart projection support
- Navionics worldwide chart database
- Realtime Survey matrix
- Sidescan Sonar support
- Viking Modules expansion interface
- Virtually unlimited DTM matrix size
- XYZ Data import/export

Viking Survey used during a single beam survey

Easy To Use

An important aspect of Viking Survey is its ease of use. The interface is divided into logical sections all of which have clearly visible figures. Only the necessary tools and buttons are displayed on the screen, offering a clean and easy to use interface.

Sidescan Survey of a large wreck in the Waddenzee

Areas Of Use:

With support for most echo sounders, realtime sidescan sonar and additional hydrographic equipment. Viking Survey is a great tool for both large and small scale survey projects on virtually any type of vessel.
